(54) Abstract Title

Bactericide combinations in detergents

(57) The invention concerns the use of synergistic combinations of bactericides in detergent compositions. In particular the use of selected bactericides as tabulated can show surprising synergistic bactericidal effects when used in combination, as well as potentially being suitable per se when in both cases combined with surfactants with an hydrocarbon chain length of between 12 and 18 carbon atoms. Further improvements in bactericidal benefits are disclosed when such compositions include detergent enzymes, particularly proteinaceous enzymes.

Synergistic combinations of bactericides in detergents formulations

The present invention concerns the use of synergistic combinations of bactericides in detergents compositions. In particular the bactericides which can expected to show synergistic effects when used in combination, as well as potentially being suitable per se for use in detergents, are disclosed in combination with detergent additives and can show surprisingly efficacious results.

Household and industrial cleaners are used routinely to maintain hygiene, this has traditionally been from two effects. First the physical removal of soil substances and bacteria, viruses and microorganisms, second chemical oxidisation to kill and/or destroy the harmful agents. These effects have typically been achieved using bleaching substances combined with surfactants. More recently the indiscriminate nature of such systems, ie those which also pose potential hazards to humans, has led to the introduction of agents that more specifically target bacteria, viruses and microorganisms. Hitherto these agents have typically been used in isolation for specific purposes and claims for such products emphasise the ability of single components to perform a hygiene function and their combination with other sources of antibacterial products is not advised.

Examples of the recently art on biocidal detergents formulations are disclosed in WO 9916854 A1, WO 9913037 A1, EP 0901367 A1, EP 0888434 A1, EP 0887335 A1, EP 0887336 A1, EP 0887338 A1, WO 9855092 A1, WO 9855093 A1, WO 9855096 A1, WO 9855097 A1, WO 9855098 A1, WO 9855406 A1, WO 9854276 A1, EP 0880472 A1, EP 0877800 A1, WO 9845228 A1, WO 9837760 A1, WO 9836046 A1, EP 0859046 A1, EP 0852260 A1, WO 9824314 A1, EP 0839186 A1, WO 9816605 A1, WO 9802139 A1. These disclosures do not fully anticipate the use of the synergistic combinations herein disclosed and fail to recognise the general principle recognised herein. They therefore suffer from the disadvantage that the compositions will potentially need to use excess biocide to produce the desired result.

It is an object of the present invention to obviate or mitigate some or all of these disadvantages with prior art compositions.

According to the present invention there is provided a bactericide as listed in table 1 in combination with an anionic, cationic, non-anionic or amphoteric surface active agent or agents

which have a (C_{12-18}) alkyl group as the longest alkyl chain attached to the hydrophilic moiety or moieties. Preferable combinations of two or three biocides as in table 1 are also independently claimed.

With a composition according to the abovementioned description surprisingly improved biocidal activity as measured by the weight effectiveness of the total biocides used, can be found.

With the advent of the Biocidal Products Directive it is considered particularly advantageous to combine one or more biocides in anti-bacterial, virucidal and anti-microorganism preparations. Surprisingly we have found that such combinations are particularly effective when used in combination with detergents surfactants and that co-operative three and four and multi-way synergy between surfactant(s) and biocide(s) and other detergents components herein disclosed is commonplace within the selected list of materials disclosed.

The detergent formulation in accordance with the invention will include a bactericide derived from list 1, preferably a combination of two or even three such materials selected from list 1, in combination with a surfactant and auxiliary detergent components, particularly enzymes, as herein disclosed.

It is an object of the present invention to disclose to the public such synergistic combinations of biocides as may be reasonably anticipated by the person skilled in the art which when used in combination with known surfactants and their combinations, all of which described are understood as freely combined and interchanged, depending upon the specific use intended by such person, give surprisingly beneficial anti-bacterial, virucidal and anti-microorganism effects. This is particularly so when combined singly or in combination with the other classes of detergents components disclosed.

It is also an object of the present invention to disclose those materials as defined within the biocidal products directive that the skilled formulator will reasonably choose, in particular their combinations such as derive regulatory advantage which surprisingly are claimed as having beneficial and synergistic, formally stated as inventive, effects in combination with the other classes of detergents components disclosed, particularly enzymes.

The detergent formulation in accordance with the invention will include at least one surface active agent which may, for example, be an anionic, cationic, non-anionic or amphoteric surface active agent. Any of the surface active agents widely used in detergent formulations may be employed in the present invention. Such agents are typically employed in amounts of from 1 to 15% by weight.

If an amphoteric surface active agent is used it may be present in the formulation in an amount of 0.1 to 10% by weight, more preferably 0.5 to 5%, even more preferably 1 to 4% on the same basis.

The amphoteric surface active agent may be betaine surface active agent. Preferred betaines may be either of the formula (I) or (II).

$$R^{1}$$

$$|$$

$$R^{3}-N^{+}-CH_{2}-COO^{-}$$

$$|$$

$$R^{2}$$
(I)

$$\begin{array}{c} R^{1} \\ | \\ R^{3}CONHCH_{2}CH_{2}CH_{2}N^{+}-CH_{2}COO^{-} \\ | \\ R^{2} \end{array} \tag{II}$$

In the above formula, R^1 and R^2 may be the same or different $C_{1.4}$ alkyl groups whereas R^3 is an alkyl group having 8-22 carbon atoms, more preferably 12 to 18 carbon atoms e.g. mixed C_{10} to C_{14} .

The preferred betaine for use is cocoamidopropyl betaine.

An alternative amphoteric surface active agent for use in the formulation of the invention is a glycinate of the formula

R3NHCH2CO2H

where R³ is as defined above.

Other suitable materials are as given in chapter 1 of "Amphoteric Surfactants", e.g. Lomax Ed, Marcel Decker, New York 1996.

It is highly preferred that a cationic surface active agent is employed in conjunction with the amphoteric surface active agent. The cationic surface active agent is preferably used in an amount of up to 6% by weight of the formulation and is conveniently added in conjunction with a clay especially as herein described. Examples of suitable cationic surface active agents include quaternary ammonium salts having three lower (C_{1.4}) alkyl groups (preferably methyl groups) and a long chain (C_{8.20}) alkyl group, e.g. coco trimethyl ammonium chloride. Further examples include alkyl pyridinium salts and other compounds in which the nitrogen atom of the pyridine assumes a quaternary form, e.g. as in an alkyl pyridinium bromide. Cationics with C10 to C20, more preferably with, C12 to C18 alkyl chains are preferred.

Further examples of cationic surface active agents which may be used include amine and imidazoline salts.

If an anionic surface active agent is used then it is preferably present in the formulation in an amount of up to 20%, more preferably up to 10%, even more preferably up to 5% by weight of the formulation. Examples of anionic surface active agents which may be employed include alkylaryl sulphonates, alkyl sulphates, ether sulphates and ether carboxylates all as conventionally employed in laundry detergent formulations. Di-anionic surfactants are noted as being particularly useful. Anionics with C10 to C20, more preferably with, C12 to C18 alkyl chains are preferred.

If a non-ionic surface active agent is used then it is preferably present in an amount of up to 20% by weight of the formulation, more preferably 2 to 10% on the same basis. Examples of non-ionic surface active agents which may be used include alkoxylates, ethylene oxide/propylene oxide block copolymers, alkanolamides (e.g. monoethanolamides and diethanolamides), esters and amine oxides. Non-ionics with C10 to C20, more preferably with, C12 to C18 alkyl chains are preferred.

The surfactant can be present at up to 25%, more preferably between 1% and 20%. For textile washing compositions the most preferable range is between 10 and 20% and for hard surface cleaning between 1 and 5% and for fabric refresher and air freshener products less than 1%. The preferred surfactant is one carrying an electrical charge, most preferably an amphoteric or anionic surfactant.

Additional detergent components

Builder

The formulation may include at least one builder salt in a total amount of 0.1% to 50% by weight of the formulation. Mixtures of builder salts are typically employed. The builder may be for example be an alkali metal phosphate or alkali metal carbonate. The person skilled in the art will select a suitable combination of phosphates from ortho, pyro and triphosphates. In particular alkali metal triphosphates with a Phase 1 content of greater than 40% are preferable for applications requiring rapid dissolution, whereas for applications requiring slow release a Phase 2 content of greater than 40% is desirable. Similarly the degree of hydration of the salts will be chosen, salts with less than 5% water of hydration are preferred. Other suitable builders are zeolites, citric acid, nitrilo tri-acetic acid, Alkali metal carbonates or sodium citrate. Zeolites X, Y and MAP are all considered suitable.

Polymeric components

A number of polymeric components will typically be considered for use as part of compositions within the scope of the invention.

A variety of water soluble polymers may be added to perform variety of functions. For example as thickeners and anti scaling agents.

Suitable polymers include, Addition polymers - e.g. Poly Vinyl; ethers, esters, amides, carboxylates, maleates, methacrylates, acrylates, alcohols, acetates, sulphonated polymers and amphoteric polymers and copolymers thereof. In particular block copolymers, homo polymer and copolymer prepared using vinyl carboxylates in combination with monomer selected from the group consisting of (meth)acrylonitrile, 2-trimethylsiloxyethyl (meth)acrylate, 2-ethylhexyl

(meth)acrylate, 2-trimethyl-siloxyethyl (meth)acrylate, 2-ethylhexyl (meth)acrylate, 2-ethoxyethyl (meth)acrylate, sorbyl (meth)acrylate, butyl (meth)acrylate, ethyl (meth)acrylate, glycidyl (meth)acrylate, hexyl (meth)acrylate, hexyl (meth)acrylate, hydroxyethyl (meth)acrylate, hydroxypropyl (meth)acrylate, (meth)acrylate, lauryl (meth)acrylate, methyl (meth)acrylate, octyl (meth)acrylate, p-tolyl (meth)acrylate, phenyl (meth)acrylate, propyl (meth)acrylate, sorbyl (meth)acrylate, and stearyl (meth)acrylate, may be used. Homo and block polymers of the above monomers are particularly suitable for use in the inks of the invention.

Other suitable polymers include condensation polymers - eg Poly; esters, and urethanes, gelatin, Carrageen, Gum Arabic (eg grade NF FCC ex Sarcom Inc), Agar (eg Agar-Agar NF FCC Gel 10 ex Sarcom Inc), Guar Gum (eg Powder HV-101 NF FCC ex Sarcom Inc), Locust Bean Gum (eg SG-14 FCC ex Sarcom Inc), Ghatti Gum (eg #1 FCC ex Sarcom Inc), Karaya Gum (eg #1 FCC ex Sarcom Inc), Karaya Gum (eg #1 FCC ex Sarcom Inc), Xanthan Gums (eg XAN-90 NF FCC ex Sarcom Inc.) and alginates.

Particularly preferred polymers are the Chitins, Chitosan and derivatives for their synergistic potentiation of antibacterial efficacy in combination with the selected organic bactericides of table 1.

Preferred molecular weights are from 5,000 to 100,000. More preferably from 10,000 to 30,000. Suitable polymeric materials known in the art are Hydrogenated caster oils (eg Croduret 50 ex Croda), acrylic acid polymers (eg ex National Starch) Acrylate maleate polymers (eg Sokolan CP-5 and CP-10 ex BASF) and poly ethylene glycols (eg ex Hoechst), poly vinyl pyrrolidone (eg K50 ex ISP), Carbopol (ex 3V). Suitable levels of polymer inclusion are between 0.1 to 10% more preferably between 0.2 and 2% most preferably between 0.3 and 1.2%.

A variety of substantially water insoluble polymers may be added to perform a variety of functions for example soil release agents and tablet excipients. Eg polyoxyethylene terephthalate, polyethylene terephthalate and cellulose and its hydroxy alkyl and carboxy alkyl derivatives. Such materials when incorporated in liquid compositions within the scope of the invention are preferably used with a particle size of from 0.1 to 50μm, more preferably from 1 to 10μm. When used in solid detergents compositions they are preferably used with a size from 200 to 3000μm. More preferably from 500 to 2000μm, most preferably from 800 to 1200μm.

Bleaches

A bleaching composition may also be included. The preferred bleaching system for use in the invention comprises a hydrogen peroxide precursor compound and the bleach activator as known in the art which is capable of reacting with the hydrogen peroxide to generate a peracid.

The hydrogen peroxide precursor compound may, for example, be an inorganic persalt e.g. a perborate (in the monohydrate and/or tetra hydrate form), a percarbonate or a persulphate. The alkali metal salts of these compounds are preferred, particularly sodium and potassium salts. Alternatively in the case where the detergent formulation is in solid form, the bleaching agent may be a urea-hydrogen peroxide complex. In the case of a liquid formulation the hydrogen peroxide precursor compound may be hydrogen peroxide per se. Pre-formed per acids known in the art are also considered suitable.

Specific examples of pre-formed per acids bleaches which may be used in the detergent formulations of the invention include phthalimido peroxihexanoic acid eg Eureco (TM) ex Ausimont).

Specific examples of bleach activators which may be used in the detergent formulations of the invention include tetra acetyl ethylene diamine, hexa acetyl sorbitol, hexa acetyl mannitol, penta acetyl glucose and octa acetyl sucrose. Particularly preferred are hexa acetyl sorbitol and hexa acetyl mannitol which may be used in admixture, e.g. as disclosed in EP-A-0 525 239. Further examples are compounds having nitrogen atoms in the basic carbohydrate skeleton, e.g. the peracetylated forms of N-methyl gluxconamide, N-methyl glucamine and glucopyronosyl amine. It is considered particularly preferable to combine such bleach activators and such pre-formed per acids with one another to promote antibacterial nd bleachable stain and soils cleaning. Particularly preferred combinations are of per acetic acid precursors with precursors of higher alkyl peracids such as fall in the range propyl to behenate. Particularly preferred are the branched alkyl analogues of such materials.

Chlorine bleaches may also be employed either as a hypochlorite, for example, an alkali metal hypochlorite or as a precursor compound such as Trichloro iso cyanuric acid, sodium dichloro isocyanurate and its di hydrate (eg Oxidan (TM) DCN/WSG ex Sigma). Such systems may be used in conjunction with a suitable catalyst for example as described in EP 937 772 (Procter).

Effervescent systems

An effervescent system may be employed. Suitable agents include a mixture of an acid and an alkali metal carbonate or bicarbonate, for example citric acid and sodium carbonate. Sodium percarbonate peroxohydrate (eg ex Eka chemicals) is also considered.

Clays

A clay may be used in the composition, either per se or as a carrier for the perfume. The clay which is used in the formulation of the invention may be any one of the fabric softening clays having fabric softening properties used in laundry detergent formulations. Such clays are generally of the "lamellar type" and are such that the layers "separate" to become deposited on the garments being washed. The clay may for example be a Smectite such as a Laponite, Bentonite, Montmorrillonite, Hectorite or Saponite. For example, the clay may be a Sodium Montmorrillonite, a Sodium Hectorite, a Sodium Saponite, a Calcium Montmorrillonite or a Lithium Hectorite.

Softener components

The term "fabric softening agent" as used herein includes cationic and nonionic fabric softeners used alone and also in combination with each other. A preferred fabric softening agent of the present invention is a mixture of cationic and nonionic fabric softeners. Examples of fabric softening agents that are especially suitable for use in the invention include the compositions described in US 4,103,047, US 4,237,155, US 3,686,025, 3,849,435 and U.S. 4,073,996. Said patents are hereby incorporated herein by reference. Another preferred type of fabric softener is described in detail in U.S. Pat. No. 4,661,269 (Procter), said patent being incorporated herein by reference. Examples of nonionic fabric softeners are the sorbitan esters, C12 - C26 fatty alcohols, and fatty amines described herein. More biodegradable fabric softener compounds can be desirable. Biodegradability can be increased, e.g., by incorporating easily destroyed linkages into hydrophobic groups. Such linkages include ester linkages, amide linkages, and linkages containing unsaturation and/or hydroxy groups. Examples of such fabric softeners can be found in US patents 3,408,361, 4.709,045, 4,233,451, 4,127,489, 3,689,424, 4,128,485, 4,161,604,

4,189,593, 4,339,391, said patents being incorporated herein by reference.

Enzymes

An enzyme may be included in the composition. The enzyme may, for example, be a protease, amylase, lipase, an endo and exo cellulases, cholesterol oxidases (particularly as described in WO 99/45106 (Meiji Seika)) or mixtures thereof such as commonly used in detergent formulations. Examples of suitable enzymes are available under the names Opticlean (TM), Savinase (TM), Esperase (TM); Termamyl (TM), Maxamayl (TM), Lipomax (TM), Lipolase (TM); Celluzyme (TM) and Carezyme (TM). The amount of enzyme incorporated in the formulation will depend on activity but will typically be 0.1 to 3%. This level is particularly suitable for Savinase 6.0T, Termamyl 60T, Celluzyme 0.7T and Lipomax.

It is a highly preferred aspect of the invention that bactericides listed in table 1 be combined with one or more enzymatic components. The person skilled in the art will readily identify those materials from table 1 which do not significantly inhibit enzymatic activity and thereby identify those were synergistic bactericidal effects are obtained.

It will be appreciated that the formulation may incorporate additional components as conventionally included in a hard surface cleaner, laundry detergent, fabric refresher, fabric conditioner or similar product.

For a laundry detergent formulation it will be appreciated that the formulation may incorporate additional components as conventionally included. One example of such an additional component is a soap or fatty acid which may be used in an amount of up to 5% by weight as an antifoam or processing aid. Particularly preferred are those with C8 to C22 alkyl chains, more preferably C12 to C12 alkyl and with an iodine value less than 5 more preferably less than 1. Particularly suitable are the Prifac (TM) and Pristerine (TM) materials supplied by Uniquema.

Further examples include anti-foam agents, sequestrants (e.g. of the phosphonate type), whiteness maintenance agents (e.g. CMC, polyoxyethylene terephthalate, polyethylene terephthalate), colorants (e.g. dyestuffs), perfume, flow control agents (e.g. a sulphate) flow enhancer (e.g. a zeolite), pH regulators (e.g. a carbonate or bicarbonate), anti-corrosion agents, dye transfer

inhibitors (e.g. PVP) and optical brighteners (e.g. Tinopal CBS-X and Tinopal DMS-X). These components may, for example, each be present in amounts up to 1% by weight of the formulation.

Cyclodextrins and cyclodextrinoids, optionally as alcohol, amide, ether, ester, hydrophobised, conjugated, granulated, encapsulated and solubilised, derivitised and embodied as such are all envisaged as being potentially incorporated ways of changing their use provided that they retain some ability to complex smaller molecules.

Cyclodextrin incorporation of between 0 and 5%, more preferably between 0.05 and 2%, most preferably between 0.075 and 1.25% is within the scope of the invention.

Perfumes

A perfume will typically be formulated in a product using the invention. The perfume ingredients and compositions of this invention are the conventional ones known in the art. Selection of any perfume component, or amount of perfume, is based on aesthetic considerations. Examples of suitable perfume compounds and compositions can be found in US 4,145,184, US 4,209,417, US 4,515,705, US 4,152,272, all of which are patents being incorporated herein by reference. Many suitable perfume ingredients with odour characteristics, and physical and chemical properties, such as molecular weight and boiling point, are given in "Perfume and Flavour Chemicals (Aroma Chemicals)," Steffen Arctander, 1969, publ., Steffen Arctander incorporated herein by reference. Examples of the highly volatile, low boiling, perfume ingredients are: anethole, benzaldehyde, benzyl acetate, benzyl alcohol, benzyl formate, iso-bornyl acetate, camphene, citronellol, citronellyl acetate, para-cymene, decanal, cis-citral (neral), citronellal, dihydrolinalool, dihydromyrcenol, dimethyl phenyl carbinol, eucalyptol, geranial, geraniol, geranyl acetate, geranyl nitrile, cis-3-hexenyl acetate, hydroxycitronellal, d-limonene, linalool, linalool oxide, linalyl acetate, linalyl propionate, methyl anthranilate, alpha-methyl ionone, methyl nonyl acetaldehyde, methyl phenyl carbinyl acetate, laevo-menthyl acetate, menthone, iso-menthone, myrcene, myrcenyl acetate, myrcenol, nerol, neryl acetate, nonyl acetate, phenyl ethyl alcohol, alpha-pinene, beta-pinene, gamma-terpinene, alpha-terpineol, beta-terpineol, terpinyl acetate, and vertenex (para-tertiary-butyl cyclohexyl acetate).

Natural or Essential oils are particularly suitable for use in the invention. For example, thymol, eugenol, menthol also tea tree, pineol, eucalyptus, camphor, cedar, oloe vera, citronelol, citrus, lemon, lime, limonene, grapefruit, geranium, mint, peppermint, spearmint, cedarwood, clove, litsea, sassafras, patchouli, coriander oils and the principle sub components thereof.

Also suitable are lavandin, with major components of linalool, linalyl acetate, geraniol and citronellol. Lemon oil and orange terpenes with major components of about 95% d-limonene. Geraniol, menthol and eucalyptus oils include the moderately volatile perfume ingredients: amyl cinnamic aldehyde, iso-amyl salicylate, beta-caryophyllene, cedrene, cinnamic alcohol, coumarin, dimethyl benzyl carbinyl acetate, ethyl vanillin, eugenol, iso-eugenol, flor acetate, heliotropine, 3-cis-hexenyl salicylate, hexyl salicylate, lilial (para-tertiarybutyl-alpha-methyl hydrocinnamic aldehyde), gamma-methyl ionone, nerolidol, patchouli alcohol, phenyl hexanol, beta-selinene, trichloromethyl phenyl carbinyl acetate, triethyl citrate, vanillin, and veratraldehyde. Cedarwood terpenes are composed mainly of alpha-cedrene, beta-cedrene, and other C15H24 sesquiterpenes. Examples of suitable less volatile, high boiling, perfume ingredients are: benzophenone, benzyl salicylate, ethylene brassylate, galaxolide (1,3,4,6,7,8hexahydro-4,6,6,7,8,8-hexamethyl-cyclo-penta-gama-2-benzopyran), hexyl cinnamic aldehyde, lyral (4 - (4 - hydroxy-4-methyl pentyl) - 3 - cyclohexene - 10 - carboxaldehyde), methyl cedrylone, methyl dihydro jasmonate, methyl-beta-naphthyl ketone, musk indanone, musk ketone, musk tibetene, and phenylethyl phenyl acetate. Such components are particularly preferred constituents of any perfume composition used in the invention.

It is especially preferred to use a material from table 1 which also exhibits perfumistic characteristics in combination with a perfume, particularly when utilising the aforementioned perfumistic components.

The bactericide

Compositions in accordance with the present invention contain from 5 to 0.0001% bactericide, virucide or anti-microbial agent, preferably from 2 to 0.001%, more preferably from 1 to 0.005% most preferably from 0.1 to 0.01%.

When used in combination the bactericide, virucide or anti-microbial agents as listed in table 1 will each be present at a level of from 5 to 0.00003% bactericide, virucide or anti-microbial agent, preferably from 3 to 0.0001%, more preferably from 1 to 0.0001% most preferably from 0.1 to 0.001%. Those materials in table 1 capable of acting as bleaches and surfactants are preferred components only in combination with components not of these classes on the list. Most preferred are the bactericidal agents in table 1 which are single organic molecules with a molecular weight above 250. Not wishing to be bound by theorey such molecules possess lower potential for human toxicity by virtue of their higher molecular weigh and absence of inorganic materials (eg mercury and zinc).

Suitable selected bactericides are as listed in table 1:

D-Gluconic acid, monosodium salt	527-07-1
D-Valine, N-[2-chloro-4-(trifluoromethyl)phenyl]-,cyano(3-phenoxyphenyl)methyl ester	102851-06-9
Decanedioic acid, dimethyl ester	102831-08-9
decanoic acid	334-48-5
Decanoic acid, ethyl ester	
decyldimethylamine	110-38-3
di(2-hydroxy-ethoxy)methane; equilibrium intentional mixture	1120-24-7
Di(tributyItin) itaconate-methyl methacrylate copolymer	
Di(tributyltin) itaconate-styrene copolymer	108166-32-1
di-fluormethyl-thiophthalimid-benzimidazol methyl carbamat	104063-25-4
dialkylarylmethylammonium chlorides or bromides	86473-58-7
dialkyldiarylammonium chlorides or bromides	?
dialkyldimethylammonium chlorides or bromides	?
dialquil metil cetona	?
	1338-23-4
dicarbonic acid, dimethyl ester	4525-33-1
didecyl methyl alkoxy ammonium propionate	?
didecyl methyl polyethoxyl-ammoniumpropionate	?
didecyl polyoxethyl ammonium borate	?
Didecylmetyloxyetyl-ammoniumpropionate	107879-22-1
diethylenglykolmono-n-hexylester	112-59-4
digluconato de clorhexidina	118472-51-0
Dill, ext.	90028-03-8
dimethyl (octyl) amine	7378-99-6
Dimethyl (tetradecyl) amine	112-75-4
dimethyl [1,2-phenylenebis(iminocarbonothioyl)]bis[carbamate]	25364-05-8
dimethylcoco alkyl-2,4-dichlorobenzyl ammonium chlorid	?
Dioxacarb	6988-21-2
Diphosphoric acid, tetrapotassium salt	7320-34-5
DIPTERYX ODORATA, EXT.	90028-06-1
Disodium metasilicate	6834-92-0
distannoxane,hexabutyl-	56-35-9
Distillates (coal tar), upper	65996-91-0
disulfurous acid, disodium salt	7681-57-4
docusate sodium	577-11-7
Dodecanal	112-54-9
dodecanaminium, N-(carboxymethyl)-N,N-dimethyl-, chloride	55142-08-0
dodecanoic acid	143-07-7
dodecanoic acid, 2,3-dihydroxypropyl ester	142-18-7
Dodecanoic acid, methyl ester	111-82-0
Dodecarbon tetrazinc docosaoxide, heptahydrate	138265-88-0
Dodecilbenceno sulfato de trietanolamina	27323-41-7
dodecyl (2-hydroxy-3-sulphonatopropl) dimethyl ammonium	13197-76-7
dodecyl -di(aminoethyl)-glycine	93839-34-0
dodecyldimethylamine	112-18-5
dodecyldimethylamine	1643-20-5
E-phthalimidoperoxycaproic acid	128275-31-0
enilconazol	73790-28-0
Epon 828-tributyltin-4-aminobutanoate copolymer	77492-36-5
Epon 828-tributyltinglycinate copolymer	77492-37-6
esbiothrin	84030-86-4
Ester propílico del ácido 4- hidroxibenzoico	94-17-5
Etanamminio, 2-[[[(acetilossi)metil]ammino]-6-[metossimetil)[/ottadecilossi)metil]ammino-1,3,5-triazin-2-	
il](metossimetil)ammino]metossi]-N.N-bis(2-idrossietil)-N-metil-,metil solfato (sale)	33000 30-0

ethanamine, 2,2-dimethoxy-N-methyl-	122-07-6
Ethanamine, 2-(decylthio)-	29873-30-1
Ethanamine, 2-(decylthio)-, hydrochloride	36362-09-1
Ethanamine, N,N-diethyl-	121-44-8
ethanamine, N-ethyl-	109-89-7
ethanamine, N-ethyl-N-hydroxy-	3710-84-7
ethanaminium, 2-hydroxy-N,N-bis (2-hydroxyethyl)-N-methyl-, methyl sulphate (salt)	29463-06-7
ethanaminium, N,N,N-trimethyl-2((1-oxo-2-propenyl)oxy)-chloride	44992-01-0
ethanaminium, N,N,N-trimethyl-2-((2-methyl-1-oxo-2-propenyl)oxy)-, chloride	5039-78-1
ethanaminium, N,N-dimethyl- 2-((1-oxooctadecyl) oxy)-N-(2-((1-oxooctadecyl) oxy) ethyl)-, chloride	67846-68-8
ethanedial	107-22-2
ethanedioic acid	144-62-7
ethaneperoxoic acid	79-21-0
ethanesulfonic acid, 2-hydroxy-, compound with 4,4'-[1,6-hexanediylbis(oxy)bis(benzenecarboximidamide)(2:1)	659-40-5
ethanesulfonic acid, 2-hydroxy-, compound with 4,4'-[1,6- hexanediylbis(oxy)bis[3-bromobenzene-carboximidamide] (2:1)	93856-83-8
Ethanimidothioic acid, N[[(methylamino)carbonyl]oxy]-methyl ester	16752-77-5
ethanol, 2, 2 -dibromo- 2 -nitro	69094-18-4
ethanol, 2,2'-(methylenebis(oxy))bis-	2565-36-8
ethanol, 2- [(3-iodo-2-propynyl)oxy]-	57006-76-5
ethanol, 2-(4-chlorophenoxy)	1892-43-9
Ethanol, 2-(hydroxymethoxy)-	13149-79-6
Ethanol, 2-(hydroxymethylamino)-	34375-28-5
ethanol, 2-[(3-iodo-2-propynyl)oxy]-, phenylcarbamate	88558-41-2
ethanol, 2-phenoxy	122-99-6
Ethanol, 2-phenoxy-, propanoate	23495-12-7
ethanol,2-(diethylamino)-	100-37-8
ethanolamine hydroperbromide	?
Ethanone, 1-(1,2,3,4,5,6,7,8-octahydro-2,3,8,8-tetramethyl-2-naphthalenyl)-	54464-57 - 2
Ethanone, 1-(1,2,3,4,6,7,8,8a-octahydro-2,3,8,8-tetramethyl-2-naphthalenyl)-	68155-67-9
Ethanone, 1-(1,2,3,5,6,7,8,8a-octahydro-2,3,8,8-tetramethyl-2-naphthalenyl)-	68155-66-8

Water	to 100%				

Another base composition on which the above variants can be practised is composed of Alkyl benzene sulphonic acid 2.5%, Alkyl ether sulphate 2.9%, Ethoylated nonionic 5%, Isopropyl alcohol 4%, Dipropylene glycol monomethyl ether 0.5%, potassium phosphate 0.5%, Cellosize (thickener) 0.25%, Colorants 0.003%, Perfumes 0.5%, Bactericides from table 1; 0.2% and water to 100%.

Bacteriological testing is a complex process and detailed knowledge of the ancillary procedures, precautions and methods is required for testing, as known by those skilled in the art.

The methods used and assumed herein are as described in 'Standard Methods, for the examination of water and wastewater', L.S. Clesceri et al Eds, 1989, 17th Edn, Published by the American Public health administration, and later editions thereof.

The evaluator is directed to test methods in Parts 9000 to 9240 of the above work and to the implementation thereof. The tests cited herein are taken from 'Laboratory methods for the Evaluation of Synergy'. David Green wood, pages 53 to 67.

Typical results where Bactericides A, B and C are independently chosen from list 1 are:

Reduction in activity of a mix of bacteria

Composition	Reduction activity	Typical range of	
	after contact (log)	Reduction activity after	
		contact (log)	
A1	1	1-3	
A2	4	3-6	
A3	4	3-6	
A4	5	4-7	
A5	6	5-8	
A6	6	5-8	
A7	6	6-9	
A8	4	3-6	
A8	3	2-5	

A = 5-chloro-2-(2,4-dichloropnenoxy)-,phenol.

B = 4-hydroxy-, propyl ester benzoic acid

C = Trans-3,7-dimethyl-2,6-octadien-1-ol

Claims

- 1) A bactericide as listed in table 1 in combination with an anionic, cationic, non-anionic or amphoteric surface active agent or agents which have a (C_{12-18}) alkyl group as the longest alkyl chain attached to the hydrophilic moiety or moieties.
- 2) A combination of two bactericides as listed in table 1 in combination with an anionic, cationic, non-anionic or amphoteric surface active agent or agents which have a (C_{12-20}) alkyl group.
- 3) A combination of three bactericides as listed in table 1 in combination with an anionic, cationic, non-anionic or amphoteric surface active agent or agents which have a (C_{12-20}) alkyl group.
- 4) A composition as claimed in any of claims 1 to 3 in combination with a detergent enzyme or enzymes chosen from a proteinaceous, lipolytic, amylolytic, cellulosic, peroxidase or laccase enzyme.
- 5) A composition as claimed in any of claims 2 or 3 where total bactericide is present in a level of from 2 to 0.001%.
- 6) A composition in accordance with claims 4 and 5.
- 7) A composition as disclosed in claim 6 wherein a protease enzyme is present at a level of from 0.01 to 1% and the surfactant is an anionic surfactant present at a level of from 1 to 15%.
- 8) A composition as disclosed in claim 6 wherein the bactericidal agents or agents are taken from table 1 which are single organic molecules with a molecular weight above 248.
- 9) A composition as disclosed in claim 5 wherein a protease enzyme is present at a level of from 0.01 to 1% and the surfactant is an anionic or amphoteric surfactant present at a level of from 1 to 15% and sodium triphosphate is present from 0.1 to 45%.

- 10) A process for washing textiles in which a composition according to claim 9 is used.
- 11) A bactericidal detergent composition substantially as herein disclosed with reference to examples A2 to A9 herein described.
